Blackboard is a K-12 learning management platform that provides a central online hub that unifies teaching and learning in the classroom through four key pillars:

- Instructional Delivery and Curriculum Management
- Professional Development
- Communication and Community
- Evaluation and Assessment

In the Classroom

If your school or district uses Blackboard technology, you can easily integrate your *unitedstreaming* resources and instructional content into the Blackboard system.

Consider the following:

- Meet the individual needs of your students by posting links to *unitedstreaming* assignments geared to specific learning styles
- Use formative assessment strategies to monitor student learning by providing regular links to *unitedstreaming* quizzes you create with the Quiz Builder tool
- Create opportunities for your students to practice the writing process by providing links to *unitedstreaming* writing prompts that focus on descriptive, expository, narrative or persuasive writing techniques
- Support your district’s professional development efforts by posting *unitedstreaming* resources including the User Guide and the "*unitedstreaming* in ACTION" series in Blackboard’s central repository
- Share resources with your colleagues by posting links to documents and presentations you have created that contain *unitedstreaming* video, images, clip art and/or audio files
- Enhance your learning resources and activities with video content by linking to a *unitedstreaming* video segment

For additional eInstruction ideas, go to the Professional Development > Trainer’s Toolkit section of www.unitedstreaming.com
